what is more preferable graphs histogram , scatterplot and?

If your goal is to choose **the most preferable set of graphs** for analysis (and for your assignment), the strongest and most commonly accepted combination is:

1. Histogram
2. Scatterplot
3. Boxplot ← the best third option

This trio gives you **distribution + relationship + comparison**, which is exactly what markers look for.

Below is the clear reasoning so you can justify it in your report.

✓ 1. Histogram — to show distribution

write the **results paragraph** for all three graphs

help you choose colours that match across all graphs

if we make changes to the folder in positron how shall i add that changes to git repository as well?

Here's the **exact, correct workflow** to make sure any changes you make in **Positron** (new folders, new files, edits, deletions) are added to your **GitHub repository** as well.

This is the same workflow you've been using — but here it is in a clean, foolproof checklist.

★ **How to add Positron changes to your GitHub repository**

Step 1 — Save your files in Positron

Anything you changed must be saved first.
